Injection Molding Manager

PROFILE AND RESPONSIBILITIES

With over 10 years of management experience in the plastic manufacturing industry, the candidate will be responsible for all the plastic injection molding processes in Lamphun, Thailand. Leading production, maintenance and engineering for molding, the candidate will be responsible for daily production meeting OEE standards, introduction of new products and controlled growth of the production capacity. Also, this candidate will lead OEE improvement projects. The candidate will be responsible to reach the company's KPI goals (OEE, OTD, customer complaint, scrap rate, etc.), and lead continuous improvement projects. The candidate will report to the General Manager.

MAIN DUTIES

Responsible for the following tasks:

- Responsible for the production of injection molding parts, within the RFID manufacturing plant
- Coordinate machine and set-up planning to meet production plan
- Lead the daily activities of the production, process engineers and technicians
- Drive root-cause analysis and improvement proposals
- Build molding competence in the team
- Technically oversee and support validations of new products/ molds
- Coordinate sourcing of molds and their implementation in production
- Be responsible for the corrective & preventive maintenance of molds and machines
- Advise in the development of new products based on plastic components
- Oversee quality assurance according to ISO 9001
- Support installation and start-up of new Injection molding lines
- Coordinate design and outsourcing of tools and fixtures to support the production process
- Set-up and help execute corrective and preventive maintenance procedures and work instructions
- Create continuous improvement proposal to increase productivity, quality and availability
- Define mechanization requirements and concepts
- Report periodically OEE (KPI) results and improvement actions to the management team
- Set-up and control production using a control plan and SPC
- Lead and execute Lean & 5S projects for existing production lines
- Coordinate validation of mold, equipment and product changes.

REQUIREMENTS

- MSc or BSc in an engineering field
- Over 10 years of experience in injection molding industry
- Be an expert in root-cause analysis and improvement proposals
- Excellent English written and spoken
- Mechanical design experience (CAD)
- Project Management skills
- Methods-Time Measurement (MTM) and Value Stream Mapping (VSM)
- SPC, DOE and process management experience
- International experience
- Pragmatic, result driven, and ability to lead
